Professional Summary

Full-stack developer who built Nexus single-handedly over a six-month end-of-studies internship at Attijari Bank: a React 19 front end on a Spring Boot 3 REST and WebSocket API, backed by a MySQL/JPA model, JWT security and Jira/GitLab integrations. At TimSoft I integrated machine-learning models to add predictive features to the product and built dashboards covering 10+ key performance indicators from scratch. Earlier, at Catharsis Consulting, I centralised fragmented conference data into a single Python and Power BI reporting system that event planning ran on. I am looking for a developer role building the data and platform tooling that research teams depend on.

Technical Skills

Languages: Python, Java, SQL, JavaScript, C, C#

Back End: Spring Boot 3, Spring Security (JWT), .NET, REST APIs, WebSocket/STOMP

Data & Analytics: Power BI, data modelling, ETL/aggregation pipelines, KPI and metric design, machine-learning model integration

Databases: MySQL, Microsoft SQL Server, JPA/Hibernate

Front End: React 19, Vite, HTML/CSS

Tools: Git, GitHub, GitLab, Jira, Google Apps Script, OAuth 2.0

Professional Experience

End-of-Studies Intern (PFE), Full-Stack Developer, Attijari Bank – Tunisia Feb 2026 – Jul 2026

- Designed and built **Nexus** end to end as the sole developer: a React 19 single-page application on a Spring Boot 3 REST API, a real-time WebSocket/STOMP layer, and a MySQL domain model accessed through JPA.
- Implemented automated work scoring (RICE, MoSCoW, Kano) behind a provider-agnostic service layer, so the same feature runs against cloud LLM APIs (Groq, Gemini, Mistral) or a self-hosted Ollama model with no vendor lock-in.
- Built the analytics layer computing DORA delivery metrics – lead time, deployment frequency, change-failure rate and MTTR – alongside per-project KPIs for velocity, cycle time and on-time delivery, derived from live application data.
- Secured the platform with stateless JWT authentication, BCrypt-hashed credentials and role-based access control across six roles; admin password resets never expose plaintext.
- Integrated GitHub/GitLab via OAuth with a manager push-approval workflow, and synchronised each project to its own Jira board.

Data and Machine Learning Developer Intern, TimSoft – Tunisia Jun 2025 – Aug 2025

- Built interactive dashboards from scratch to monitor and analyse 10+ key performance indicators.
- Integrated machine-learning models into the product to add predictive features on top of existing reporting.

Business Intelligence Engineer Intern, Catharsis Consulting – Tunisia Jun 2024 – Aug 2024

- Developed a centralised data system in Python and Power BI, aggregating conference data that had previously been scattered across separate sources.
- Designed interactive dashboards tracking participant engagement, registration trends and session popularity.
- Delivered the analysis that event-planning decisions were made from.

Projects

AIESEC Recruitment Automation and Analytics — Google Apps Script, Google Sheets, 2023 – 2025
EXPA

- Automated candidate account creation in AIESEC's system the moment an attraction form is submitted, removing a

manual step from the recruitment funnel entirely.

- Built dashboards over live EXPA data to analyse recruitment performance by pipeline status.

Freelance Management Platforms

2025 – Present

- Building a role-based operations platform for an e-commerce business that tracks a product across its full lifecycle: raw materials, suppliers, production and delivery.
- OGX Search Hub for AIESEC in the UK, as Entity Support Team OGX Data Master: centralised search across international-relations partners and opportunities.

Education

ESPRIT – École Supérieure Privée d'Ingénierie et de Technologie, Tunisia
Bachelor's in Business Intelligence Engineering (final-year defense pending)

Sept 2023 – 2026

Université SESAME, Tunisia
Preparatory Cycle in Computer Science

Dec 2021 – Jun 2023

École Hexagone, Paris, France
Preparatory Cycle in Computer Science

Sept 2021 – Dec 2021

Leadership and Extracurricular

AIESEC, Bardo, Tunisia

Oct 2022 – Present

- Head of Recruitment, OCVF and HR Manager: led 8+ teams and worked with 50+ people.
- Organising committee for conferences at local, national and MEA regional level; ran end-to-end recruitment campaigns for OCP.

Rotaract Club and IEEE Computer Society, Tunisia

2020 – 2023

- Rotaract: joined as a member, became Head of Personal and Professional Development, then Vice President of Human Resources; built training tracks in first aid, marketing and design tools.
- Treasurer of the IEEE Computer Society student branch; member of JCI, Microsoft Student Club and ACM.
